

# SUNX DIGITAL FIBER FX-411

Fiber Sensors that are easy to understand and use, even for beginners

## Features of this products

1. Manual tuning with Rotation Speed Adjuster (R.S.S.)
2. Dual display indicating threshold and incident light intensity.
3. Digital display upside-down / off function
4. Key lock function prevents wrong operation by pressing the setting switch for 5sec.
5. Hold function: Peak and bottom hold values for the incident light intensity can be displayed. This is useful for checking the incident light intensity during the tasks such as drop operation.

## Target customers

This is a very easy operated Fiber Amplifier but the minus point is that it is expensive. For this reason, I recommend that you push this product to the **END USER**, where most of them are not so price sensitive. Once they determined to use, the machine maker will follow suit.
